

25th World Congress of Dermatology SINGAPORE 2023

DERMATOLOGY BEYOND BORDERS
SCIENCE · CARE · COMMUNITIES

3rd to 8th
JULY

Professor Harald Lesch

Biography

Age 62, Professor for Theoretical Astrophysics at Ludwig Maximilians-University in Munich and Professor for Philosophy of Science at Philosophical College in Munich, TV Moderator, Writer and Producer.

Scientific Subject: Complexity in Nature and Society

Actual item: Climate change, renewable energies, natural and social tipping points

Short abstract

Planetary health and human health

The change of the climate influences and disturbs our mental and physical health. This is obvious, evident and beyond any doubt. The consequences of a two degree and more hot house earth will be discussed and the consequences for the medical sector world wide will be presented. It is not only the four eyes situation in which the health issue is important, it is also the degree of trustworthiness this sector possesses and which we must use to convince every patient to do something against greenhouse gas emissions. If the medical sector not only deals with the health problematics but uses its options also for a massive information project, worldwide, this would give an enormous impact against the climate sceptics which still break the necessary transformation from the fossils towards the renewables.

What I will give are arguments which are so clear, evident and obvious that I hope to welcome you as allies in the fight against fake, conspiracy and idiotism.

President: Roy CHAN

Secretary General: Yen Loo LIM
